APPLICATIONS BUILT

RideFare ⎘
- A ride-sharing comparison tool that inputs a start location and end location which then will calculate the difference in time, distance, and price between Uber vs. Lyft. Google's API is also used so the user can drop pins to input locations.

Eat-Da-Burger ⎘
- An interactive application using a MySQL database to read and display a list of burgers in real time. A user can create a burger to add to the database, click to update a burger, and click again to delete a burger from the database.

TeeTime ⎘
- A golf application to be used by private clubs for reserving and booking tee times to its members. Using MongoDB and Express Handlebars, the app displays available tee times a user can book and updates players information instantly.
